Crescent Manufacturing Company,
Seattle, Washington.

Gentlemen:

At the suggestion of my friends and fellow tradesmen I am publishing this Cook Book, and in doing so it has been necessary to solicit advertisements to defray expenses. I have been careful to include mostly advertisements of products which I have personally used.

In view of the fact that the Crescent Manufacturing Company have taken an interest in this publication, I wish to endorse the claims made by them regarding their products, for since coming to Seattle, five years ago, I have continually used Crescent Baking Powder, and unhesitatingly state that I consider it better than any other I have ever used.

Yours very truly,

John Blizner

Loaf sugar is the best sugar for boiling. Take to each ten pounds of sugar one quart of water and one teaspoonful of cream of tartar. In order to have the sugar in perfect condition, brush down the sides with a hair brush, dipped in water, and skim, let boil on a brisk fire. The first degree is the small thread which will take about ten minutes. Dip your forefinger in ice water and then in the boiling sugar, when a small thread forms by pulling it between two fingers, the degree is reached. If the large thread is wanted, let boil a little longer, test as before and if the thread is somewhat more sufficient, it is the large thread. The next degree is the blow, and can be ascertained by putting the skimmer in the sugar, and blow through it and small feather filaments will fly out. Then comes the soft ball. Dip the finger in ice

water, then in the boiling sugar and immediately in the water again, form it between two fingers into a little ball; if too soft, let boil a little longer and try again. The hard ball is reached by boiling a little longer, and test in the same manner. Next is the crack. Make a thin wooden stick, dip into ice water, then into the sugar and immediately into the ice water again; to be certain that the sugar is done, place it between your teeth and bite it, it must not be sticky. Caramel is obtained by boiling the sugar until it turns light brown. Remove from the fire and place the bottom of the pan in ice water to prevent the sugar from turning dark.

DEGREES FOR BOILING SUGAR.

Small thread.....	228 degrees
Large thread	234 degrees
Blow	237 degrees
Soft ball	242 degrees
Hard ball	246 degrees
Crack	280 degrees

GENERAL REMARKS.

In order to insure successful work great care, discrimination and judgment must be used. The materials often differ in quality. Some flour requires more moisture than others. Some butter may be of a poor quality. Some eggs are larger than others, and therefore the good judgment of the workman is required.

Use great care in measuring and weighing. For cake baking use only cake flour (winter wheat). When making pie, always puncture the top crust before placing it on the fruit. Have the butter washed before using it. If no cake flour can be obtained use a little more butter.

Baking sheets should be cleaned by making them hot in the oven, then scrape and wipe with a cloth.

When freezing ice cream and sherbets use 1 qt. rock salt to 8 qts. crushed ice. Punches and sherbets are to be served in glasses with an handle.

In making cake mixtures always keep the eggs cold, and have the butter soft, for loaf cakes, etc.

Fruit for cakes should be rubbed in with flour before adding to mixture. When baking large fruit cake or loaf cake place a sheet of greased paper on the cake to prevent a too dark color.

When making bread or rolls, the doughs and sponges should always be well mixed. The ingredients should be carefully weighed to obtain uniformity.

Sponge is ready for use from its first drop. The temperature for sponge is 80 deg. Fahrenheit. Never let a sponge dough rise to full proof after the first

proof is worked out of it. When making straight dough, work together after two hours proof, then give it full proof.

Be very careful in selecting yeast, for this is a very important factor to create a good and healthy fermentation.

Of course any intelligent baker knows that Fleischmann's compressed yeast is always found reliable.

In writing this book it has been my aim to present a very carefully selected collection of recipes, which I have used with very good results.
